

Figure S5 Changes in expression levels of *CsHDACs* in tea leaves exposed to wounding treatment.

HDA: histone deacetylase-A; SRT: sirtuin; HDT: histone deacetylase. *CsActin* was used as an internal reference. Significant difference between control and wounding treatment are indicated (* $p \leq 0.05$, and ** $p \leq 0.01$). Data were expressed as mean \pm S. D. (n = 3).
