

Supplementary Table S1. Basic components of wastewater from natural rubber production for irrigation during dry season.

Parameters	TN	TP	K	SO ₄ ²⁻	pH
Nutrient content (mg/L)	105.37	67.75	54.07	50.97	7.63
Accumulated annual nutrient input amount (kg/hm ²)	10.5	6.75	4.2	5.4	

The annual cumulative nutrient input is calculated according to the irrigation time every 3 days, 5 L per tree each time, and 200 trees per acre. The irrigation time is from December to March of the following year.
