

A Viability of dome-shaped constructs d8 – single channels

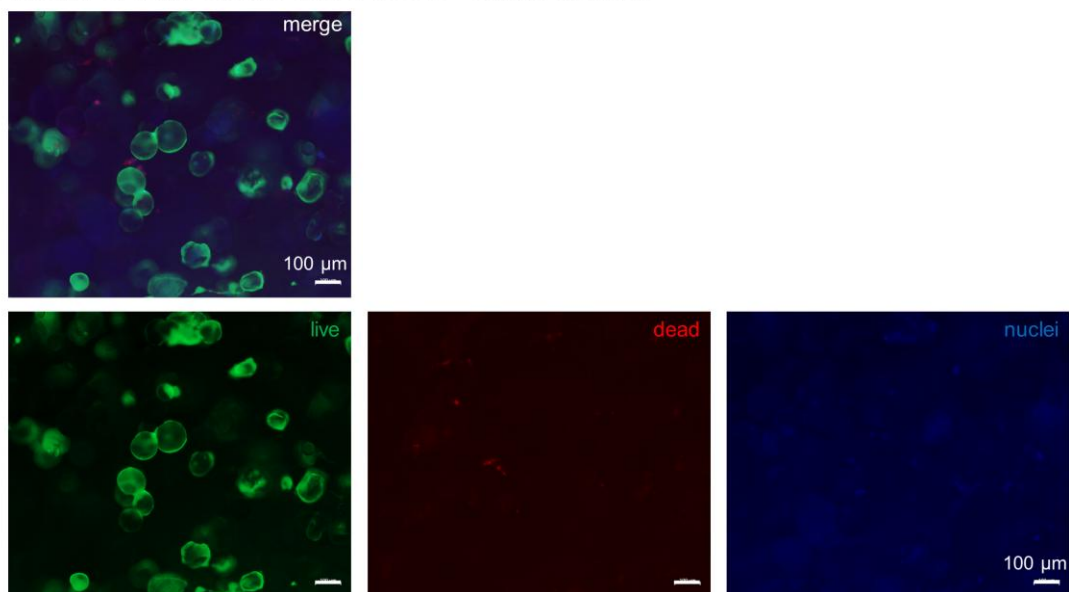

Figure S3: Viability of mature adipocytes in the printed dome-shaped constructs after 8 days of culture.

A| Live/dead staining of printed dome-shaped constructs on day 8 post-printing, scale bar: 100 µm. Single channels of live cells (green), dead cells (red) and nuclei (blue) are displayed. The pictures are representative of three different experiments with three different biological donors.
