

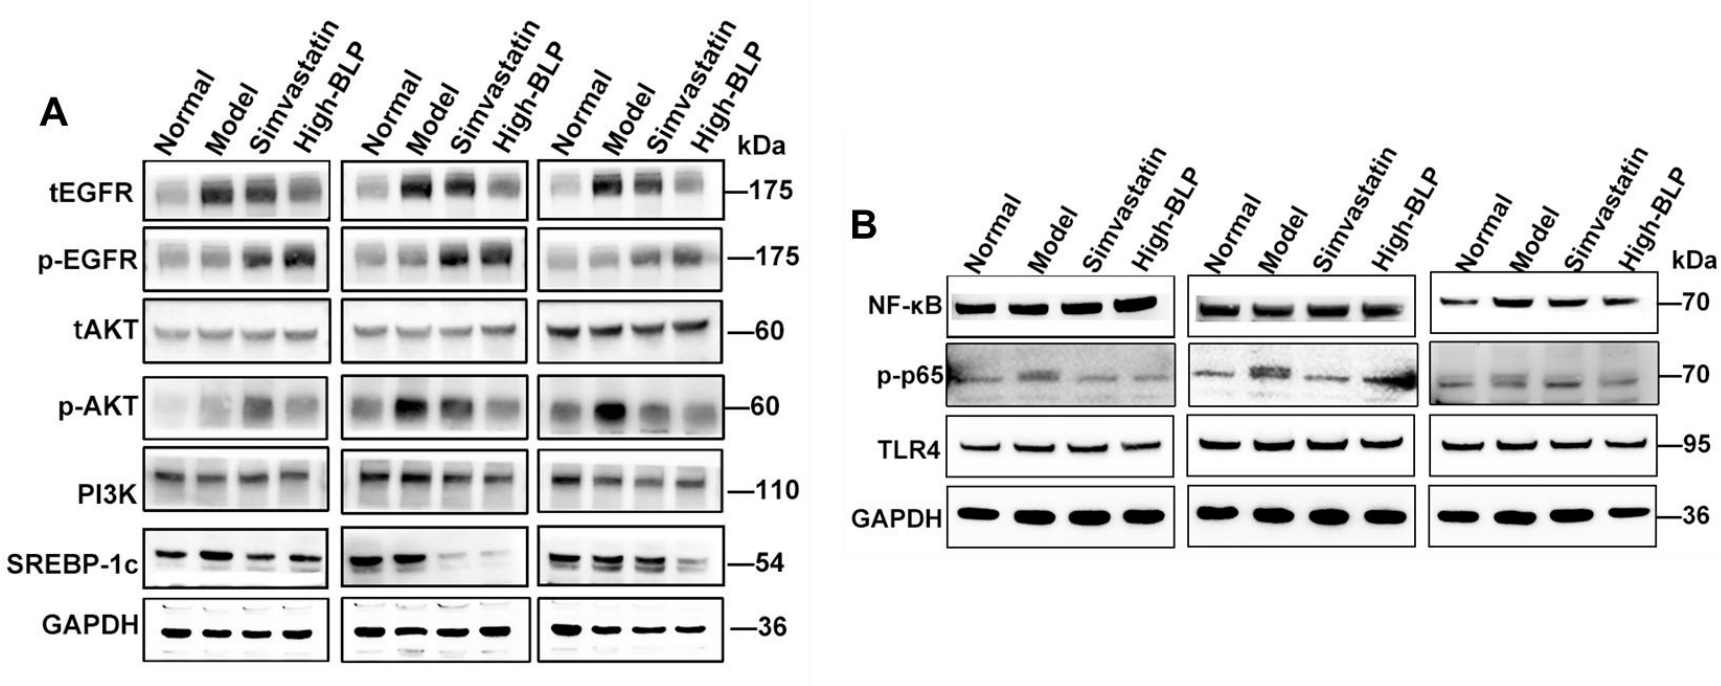

Figure S2. Western blot analysis of proteins involved in the PI3K–AKT and TLR4/NF-κB signaling pathways. (A) tEGFR, p-EGFR, tAKT, p-AKT, PI3K, and SREBP-1c in the Normal, Model, Simvastatin, and High-BLP groups. (B) NF-κB, p-p65, and TLR4 in the four experimental groups. GAPDH was loaded for inner control.
