

Supplementary Figure S5. PdPDLP6A and PdPDLP6B influence plasmodesmata apertures

(a) TEM images of plasmodesmata of *Populus* stems at the 14th internode. Scale bar = 200 nm. PD, Plasmodesmata. Plasmodesmata are shown as black regions within the boxed area.

(b) Measurement of plasmodesmata size. Values are means ± SD, $n = 15$, $^{**}P < 0.01$ (one-way ANOVA with Dunnett's test).
