

Supplementary Fig. S11

The “stop-and-go” growth manner of Type I *35S::PagCLV3-1* saplings. (a) Wild type saplings maintained normal shoot meristem. (b) Shoot meristem of Type I *35S::PagCLV3-1* saplings ceased after a period of growth, and was reformed about 10 days later.. Successive growth stages with 10 days-interval are shown from left to right. Red arrows indicate shoot meristem. White arrow denotes the position of vanished shoot meristem. Yellow arrows indicate regenerated shoot meristem. Bar = 2 cm.
