

Figure S14. Results of the population structure and Mantel test in *Lonicera oblata*. (a) Distribution of cross-validation error according to the number of clusters (K) by Admixture. (b) Population structure of 140 *L. oblata* individuals at $K = 2$ to $K=8$. (c) Genetic vs. geographical distance correlation via Mantel test. (d) Genetic vs. environmental distance correlation via Mantel test.
