

Supplementary Figure S4: Comparison of texture traits between photographs and watercolors.

Boxplots show the distribution of each trait for skin and flesh. Pink boxes (left) represent digital images, while dark purple boxes (right) represent watercolors. Individual points indicate single measurements. Asterisks above the boxes indicate the significance of t-tests between types for each trait (* $p < 0.05$, ** $p < 0.01$, *** $p < 0.001$).
