

Supplementary Table S1. Half-strength MT medium shows increased rooting rate over full-strength MT medium.

MT strength	IBA	NAA	Rooting (%)
Full	0	0	19.0 ± 1.9 ^b
Half	0	0	29.2 ± 0.95 ^a

Values are presented as mean ± SE. Different superscript letters in the same column denote statistically significant differences between MT media (One way ANOVA, $p < 0.05$). $n = 3$ replicates with 8 regenerated shoots each.
