

Supplementary Fig. 10 Pairwise synteny analyses between *A. sinensis* and four Apioideae species with non-11-chromosome karyotypes. (a) *A. sinensis* vs. *Daucus carota*. (b) *A. sinensis* vs. *Cryptotaenia japonica*. (c) *A. sinensis* vs. *Saposhnikovia divaricate*. (d) *A. sinensis* vs. *Oenanthe sinensis*. For **a-d, the colored ribbons represent syntenic blocks identified by MCScanX and visualized using SynVisio. Numbers indicate chromosome IDs.**
