

Supplemental Figure 2. *ENO1* expression levels regulated ligand-receptor interactions of other signaling pathways in different cell types

- (A) The dot plot showed the interactions of the TGF- β and EGF signaling pathways across different cell types.
- (B) The expression of the corresponding genes in different cell populations from (A).
- (C) The dot plot showed the interactions of the TNF signaling pathways across different cell types.
- (D) The expression of the corresponding genes in different cell populations from (C).
- (E) The dot plot showed the interactions of the chemokine signaling pathways across different cell types.
- (F) The expression of the corresponding genes in different cell populations from (E).
