

Fig. S1 Identification of *CdSAP2*-overexpressing transgenic *Arabidopsis*. A, Genome PCR identification of *CdSAP2* in transgenic *Arabidopsis*. B, Relative expression level of *CdSAP2* in transgenic *Arabidopsis* by RT-qPCR analysis. OE1-OE6 are six lines of transgenic *Arabidopsis*. N.D. means not detected. Data shown were mean values \pm SE of three independent biological replicates. Asterisks indicated significant differences according to Fisher's protected LSD test ($P < 0.05$).
