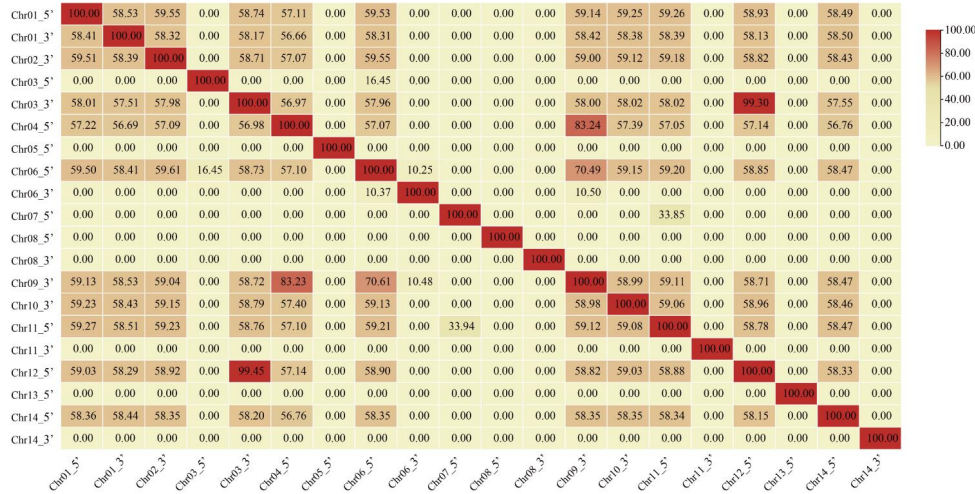

Figure S10. Pairwise similarity among 10-kb terminal regions of chromosomes. Terminal regions harboring telomeric repeats are shown. (a), *Wolfiporia hoelen* SS20. (b), *Laetiporus sulphureus* gFLaeSulp1.3 (GenBank: GCA_927399515.3). Chromosome termini with >90% sequence identity were considered candidates for terminal recombination events.
