

Supplementary Fig. S5. qRT-PCR results of miRNAs. After variable temperature treatment, miR167a-1 and miR167d-5 were up-regulated. While miR169a-5, miR169m, miR171b-3p and miR171d-1 were down-regulated. The average of three biological replicates was taken and significance analysis of expression in different samples was conducted. Different letters in the same graph indicate significant differences ($p < 0.05$).
