

Supplemental Figure 1. Dynamics of foxtail millet grain development: from 1 to 30 days after pollination (DAP). (a) Changes in the grains area of during foxtail millet grains development; (b) Changes in the perimeter of during grains development; (c) The growth of the foxtail millet grains in the length and width; (d) The change in the length/width ratio during grains development. Values for (a) , (b) , (c) and (d) are means \pm s.d. (from 1 to 15 days after pollination n = 40, from 16 to 30 days after pollination n = 20).
