

Supplemental Figure 8. The gene expression levels of *GSN1*-OX transgenic plants among six cultivars. The *Actin* gene was used as internal control to normalize gene expression data. Values are given as the mean \pm SD. * $P < 0.05$; ** $P < 0.01$ and *** $P < 0.001$ compared with the corresponding wild type control using Student's *t*-test. Standard deviations were calculated from three biological replicates.
