

Supplementary Figure 3. Pollen tube growth of *npa1 npa2* mutant.

A, C. Pollen tube growth at 8 HAP (**A**) and 12 HAP (**C**) shows no difference between *npa1 npa2* mutant and WT. Bar, 500 μ m. HAP, hours after pollination. Red arrows, the site where most pollen tubes reach. **B.** Statistics of **A**. **D.** Statistics of **C**. $n = 10$ for each sample. Two-tailed Student's *t*-test. All data shown are the mean \pm s.e.m. Three independent biological experiments were repeated.
