

Figure S13. RT-qPCR analysis of time-course expressions of *BnNCED1*, *BnNCED2*, *BnNCED3*, *BnNCED5* and *BnNCED6* in seeds of *Brassica napus*. Three biological replicates were performed, and means \pm SE are shown. The significance of differences was determined by analysis of variance ($P < 0.05$). HFA, a *Brassica napus* line with high seed oil content; LFA, a *Brassica napus* line with low seed oil content; DAP, day after pollination.
