

Supplemental Figure S4: Locations of six primer pairs (a) and PCR amplification profile (b) of the *Waxy* gene in Malaysian rice variety PT438 (PULUTAN). The promoters, UTRs, exons, and introns of *Waxy* gene are represented by black lines, blue boxes, orange boxes, and fold lines, respectively. Detection of an A/C single-nucleotide polymorphism in Exon 6 and no amplification band of primers 5 and 6 compared to the Nipponbare reference was shown. R1, R2, and R3 are three repeats for each PCR amplification profile.
