

Supplementary Fig. S2. The relationship between canopy-air temperature difference ( $dT$ ) and latent heat flux ( $LE$ ) residuals after controlling for net radiation ( $R_n$ )

Note:  $dT$  residual ( $R_n$ ) represents the residuals of  $dT$  after being regressed against  $R_n$ ;  $LE$  residual ( $R_n$ ) represents the residuals of  $LE$  after being regressed against  $R_n$ .
