

Supplementary Fig. S3 Total relative productivity (TRP), and relative productivity (RP) for chlorophyll index of quinoa genotypes 1331, 1324, and 1303. Quinoa (●); wildradish (○: a, c and e) or ryegrass (○: b, d and f), and community (crop + weed) yields (▼). Dashed lines (---) represent the expected yields in the absence of interspecific competition, whereas solid lines (—) represent the observed values under interspecific competition. UFFS, Erechim, RS, Brazil. Q: quinoa and C: competitor.
