

Supplementary Fig. S3 Phylogenetic tree generated from complete chloroplast genome sequences of 29 citrus samples (species/cultivars) with *Poncirus trifoliata* as the outgroup. The MrBayes tree generated in Geneious. Posterior probability values are given on each node. * SRA data obtained from National Centre for Biotechnology Information for chloroplast genome assembly. Chloroplast genome for *P. trifoliata* which was assembled by GetOrganelle toolkit was obtained from (He et al., 2020).
