

Supplementary Fig. S5: Effect of plant growth regulators on *in vitro* morphogenetic response (shoot multiplication) on MS medium containing 1.5 mg L^{-1} BAP + 0.2 mg L^{-1} TDZ + 8 mg L^{-1} ADS from *in vitro* derived shoot tips of *Gloriosa superba* L. (A - B) Initiation of shoot tip (C - D) Multiple shoot induction after three weeks; (E - F) Shoot multiplication after six weeks. Scale bar = 1 cm (A – B) and Scale bar = 2 cm (C – F)
