

Supplementary Fig. S1 Comparison of inverted repeat/single copy (IR/SC) junction regions in the 17 *D. bulbifera* plastomes. Gene order and boundary positions are illustrated across the large single copy (LSC), small single copy (SSC), and inverted repeat (IRa/IRb) regions.The four junctions (JLA, JLB, JSA, JSB) between LSC, SSC, and IRa, IRb regions are illustrated. For each plastome, the adjacent genes and the distances (bp) from the junction boundaries are indicated
