

Fig. S4 The endoreduplication level in tomato stem cells (A) and leaf cells (B) after *Scutellaria baicalensis* Georgi extracts treatments. EI (endoreduplication) values are on the top of the columns. Results are shown as means \pm SD ($n = 6$). Values marked with the same letter within a sampling date are not significantly different at $P < 0.05$ according to Duncan's new multiple-range test.
