

**Figure S2. Identification of *SmMYB113* overexpression lines.** (A) genome-level identification. M: DNA marker; N: Negative control; P: Positive control; OE1: *SmMYB113*-OE1 line; OE4: *SmMYB113*-OE4 line. (B) Expression levels of *SmMYB113* in untreated eggplant seedlings at the 5–6 true leaf stage. Values represent means  $\pm$  SD of three independent biological replicates (n = 3). Significant differences were determined by one-way ANOVA followed by Tukey's test (P < 0.05). Different lowercase letters indicate significant differences (P < 0.05).
