

Supplementary Figure 4

Supplementary Figure S4. Scatter plots for the causal effects of psychiatric disorders of interest on primary open-angle glaucoma (POAG). (A) Schizophrenia (SCZ) on POAG; (B) Attention-deficit/hyperactivity disorder (ADHD) on POAG; (C) Anxiety disorder (AD) on POAG; (D) Bipolar disorder (BD) on POAG; (E) Depressive disorder (DD) on POAG. The slope of each line indicates the estimated causal effects by each method. Light blue: inverse variance weighted (IVW) method; Dark blue: MR-Egger method; Green: weighted median method; Pink: weighted mode method.
