

Supplementary Table S2. Outcomes of multivariate mixed-effect models assessing impact of sex and age on analyzed parameters

Dependent variable	Sex, males			Age, years		
	β	SE	p	β	SE	p
N75 μ V 1	0.52	0.45	0.242	0.03	0.01	0.029
N75 ms 1	-1.06	1.20	0.378	0.02	0.04	0.581
P100 μ V1	-2.27	0.85	0.009	-0.06	0.03	0.044
P100 ms 1	0.08	1.06	0.938	-0.01	0.03	0.709
N135 μ V 1	1.94	1.06	0.069	0.01	0.03	0.848
N135 ms 1	-0.08	2.34	0.973	-0.09	0.08	0.241
N75 μ V 2	0.78	0.64	0.224	0.03	0.02	0.166
N75 ms 2	0.11	1.35	0.938	0.13	0.04	0.003
P100 μ V 2	-2.50	1.22	0.043	0.00	0.04	0.927
P100 ms 2	-0.39	1.21	0.746	0.11	0.04	0.006
N135 μ V 2	1.73	1.32	0.194	-0.03	0.04	0.473
N135 ms 2	-3.32	2.42	0.173	-0.02	0.08	0.776

Notes: Each row represents one mixed-effects model with the indicated parameter as dependent variable and sex (females as reference), age, and eye (left/right) as independent variables. Models considered potential confounding effects of age, sex and eye (left/right).

β , coefficient from regression model; SE, standard error
